

# Engaging Students via Active Learning

Hannah Allen, G6, Chemistry

**Caltech**

# Session Outline

- What is Active Learning?
- Active Learning Techniques
  - Part 1: Quick and simple
  - Part 2: Moderate planning
  - Part 3: More complex
- Follow-up and Resources

# Learning Outcomes

- By the end of this session, you will be able to:
  - Understand why active learning is important
  - Identify different active learning techniques and suitable situations to use them in
  - Feel more comfortable implementing active learning in your own teaching

# Active Learning

## What is Active Learning?

- Any educational method in which **all students** are asked to engage in the learning process while **in class**
- Students are not passively receiving information
- Students are participating in their own learning
- Learning as a process, not a product

## Active Learning Overview

### Active Learning

- Lots of research and evidence that students retain more information and perform better on exams when active learning is used in the classroom
- **YOU** also have to be active
- Might require more instructor preparation or involvement than traditional lecture
- Potentially “cover less material”
- Can incorporate both lecture and active learning
- *Purpose, Process, Product*

The background features several sets of concentric, curved lines in light gray and white, some solid and some dashed, creating a sense of motion and depth. A large, bright blue rectangular shape is positioned on the left side, containing the text 'Part 1'.

## Part 1

# *Quick and Simple Techniques:*

Brainstorming  
Think-Pair-Share  
Minute Paper

## *Quick and Simple Techniques*

### Brainstorming

- Limited preparation necessary
- Can be used to assess prior knowledge
- Easy way to get students talking if they're quiet or disengaged
- **How it works:**
  - Ask students a question
  - Students call out answers
  - Collect answers
- Can adjust for any length of time
- **Important:** acknowledge answers

Brainstorming

**Example:**

What active learning strategies have you experienced as a student?

- Collect answers via
  - **In-person:** white board, power point slides
  - **Online:** chat box, screen shared document

## Quick and Simple Techniques

### Think-Pair-Share

- Useful if faced with awkward silence after asking a question of the class
- **How it works:**
  - Ask students a question
  - Give students time to *think*/write
  - Students *pair* with a neighbor and discuss responses
  - Students *share* their discussion with the class
- **Set timing guidelines**
  - E.g. think for 30 seconds, pair for 2 minutes

## Think-Pair-Share

### Example:

What active learning strategies have you experienced as a student?

- Collect answers via
  - **In-person:** class discussion
  - **Online:** chat box (“flood the chat”), DM, breakout rooms

## *Quick and Simple Techniques*

### Minute Paper

- Assessment to determine how students are learning
- Done at the end of the class period or unit
- **How it works:**
  - Ask students a question that prompts them to reflect on the lesson
  - Give students some time to write a response
- Avoid yes/no questions
- Goal is to get students to reflect on the content of the lesson

## Minute Paper

### Example:

What are the two most significant things you learned today?

What is one item you still have a question about?

The background features several sets of concentric, curved lines in light gray, some solid and some dashed, creating a sense of motion or a circular path. A large blue shape, resembling a speech bubble or a callout box, is positioned on the left side of the slide. It has a white border and a small white triangle pointing downwards at its bottom center.

## Part 2

# *Moderate Planning Techniques*

Clicker Questions:  
One-Stage  
Two-Stage

## *Moderate Planning Techniques*

### Clicker Questions: One Stage

- Use to assess student prior knowledge, misconceptions, and current understanding
- Each student is required to respond
- **How it works:**
  - Ask students a question and have them select from a list of possible answers
  - Each student uses a “clicker” to select an answer
  - Instructor receives answers and reviews responses
  - Instructor can provide further explanation on answers as needed
- Immediate feedback

Clicker  
Questions:  
One Stage

## Example:

“Quick and simple” active learning techniques include

- a. Think-pair-share
- b. Minute Paper
- c. Both a and b
- d. None of the above

## *Moderate Planning Techniques*

### Clicker Questions: Two Stage

- Incorporate **peer instruction**
- Same set-up as one-stage, but now students discuss and re-vote
- **How it works:**
  - Ask students a question and have them select from a list of possible answers
  - Each student uses a “clicker” to select an answer
  - Instructor receives answers and assesses class understanding
  - Students discuss their choices with each other
  - Students re-select an answer
  - Instructor can provide further explanation on answers as needed

## *Moderate Planning Techniques*

### Clicker Questions: Two Stage

- Number of students who answer correctly usually increases substantially in the second round
- Initial percent correct between 30% and 70%
- **Benefits**
  - Requires students to take action to correct wrong answers
  - Students may better understand sources of misconceptions

# Moderate Planning Techniques

## Clicker Questions

### Technologies

- In person
  - Labeled/colored paper cards
  - Fingers on chest
  - Clicker devices
  - Phone apps, e.g. *Plickers* or *Poll Everywhere*
- Online
  - Computer and phone apps, e.g. *Poll Everywhere*
  - Integrated platform software, e.g. *Zoom Polling*

## *Moderate Planning Techniques*

### Clicker Questions

#### **Things to Consider**

- Types of questions
  - Conceptual: answer in a minute or less
  - Solve: need a few minutes to work out
- Class size
- Time to revisit topics as needed
- Cost of technology and time for testing

The background features several sets of concentric, curved lines in the top-left and bottom-right corners. These lines are in shades of light gray and include both solid and dashed styles, creating a sense of motion or a circular path.

## Part 3

# *More Complex Techniques*

Group Problem Solving  
Extended Problem Solving

## *More Complex Techniques*

### Group Problem Solving

- Impactful way to hold class discussions and promote peer instruction
- Open-ended so requires **clear instruction** and **follow-up**
- **How it works:**
  - Split students into small groups (3-4 students)
  - Students work on some question, problem, or task
  - Record thinking reasoning, steps, and ideas on the board
- **In-person:** Use wall-mounted or lap whiteboards
- **Online:** use breakout rooms and shared document or digital whiteboard

## *More Complex Techniques*

### Extended Problem Solving

- Example of a “flipped classroom”
- Recitation or discussion sections in large classes
- Relies upon peer teaching
- **How it works:**
  - Same as above, but the majority of the class might be spent this way
- **Important:** instructor and TAs circulate and interact with different student groups
- Instructor follow up or review student work to ensure all students engaged and learning

## *More Complex Techniques*

### Extended Problem Solving

#### **Things to Consider**

- Ensure everyone active and participating!
- Group size: 3-4 students per group suggested
- Group roles
  - Manager, Recorder, Presenter, Facilitator
- Whether to change group members or not throughout term

The background features several sets of concentric, curved lines in light gray and white, some solid and some dashed, creating a sense of motion and depth. A large blue speech bubble is positioned on the left side of the slide.

## Final Thoughts

### Active Learning: Instructor's Role

Instructor moves from being the **authority** to being a **guide**
